☐ False positive

Case report

Please write a detailed report on the steps taken to analyse and contain this incident, including all relevant information and the rationale for its closure.

- Time of incident: 12/27/2025 15:21:10.164

- User Involved: As per directory:  
Name: Michelle Smith  
Role: Legal  
email: michelle.smith@tryhatme.com  
Logged in Host: win-3459

- Device: win-3459 (Windows host)

- Incident Details: At 12/27/2025 15:21:10.164, a process creation event was logged where TrustedInstaller.exe (PID 3577) was launched with parent process services.exe (PID 3506). The process executed from C:\Windows\servicing\TrustedInstaller.exe with working directory C:\Windows\system32\. The activity was flagged due to an uncommon parent-child process relationship.

- Malware Identified: None identified.

- Additional Investigation:

Does this alert require escalation?

☒ Yes

☐ No

## Submitted report:

- Time of Incident: 12/27/2025 15:21:10.164

- User Involved: As per directory:

Name: Michelle Smith

Role: Legal

Email: [michelle.smith@tryhatme.com](mailto:michelle.smith@tryhatme.com)

Logged-in Host: win-3459

- Device: win-3459 (Windows host)

- Incident Details: At 12/27/2025 15:21:10.164, a process creation event was logged where TrustedInstaller.exe (PID 3577) was launched with parent process services.exe (PID 3506). The process executed from C:\Windows\servicing\TrustedInstaller.exe with working directory C:\Windows\system32\. The activity was flagged due to an uncommon parent-child process relationship.

- Malware Identified: None identified.

- Additional Investigation:

Activity took place only once upon checking in SIEM logs

- Additional Info:

Parent Process:

services.exe is a core Windows Service Control Manager responsible for starting and managing system services. It commonly launches service-related executables but does not usually start TrustedInstaller.exe directly during normal user activity.

Child Process :

TrustedInstaller.exe is the Windows Modules Installer used for installing, modifying, and removing Windows updates and protected system components. It typically runs in the context of Windows Update or the servicing stack, not as a direct child of services.exe.

Why This Is Uncommon:

While both processes are legitimate, TrustedInstaller.exe is usually invoked by update-related processes rather than directly by services.exe. This parent-child relationship is therefore less frequently observed and may indicate atypical servicing activity or warrant validation to rule out process abuse or masquerading.

- Recommendations: Escalated to L2 for further investigation
