☒ True positive

☐ False positive

Case report

Please write a detailed report on the steps taken to analyse and contain this incident, including all relevant information and the rationale for its closure.

Time of Incident: 12/27/2025 15:23:34.164

User Involved: As per directory:
Name: Miguel O'Donnell
Role: Sales
Email: miguel.odonnell@tryhame.com
Logged-in host: win-3451

Device: win-3451 (Windows host)

Incident Details: At 12/27/2025 15:23:34.164, a process creation event was logged where taskhostw.exe (PID 3585) was launched with parent process svchost.exe (PID 3653). The process executed with the command line taskhostw.exe KEYROAMING from C:\Windows\System32\.

Malware Identified: None identified.

Additional Investigation: Activity took place only once in the last 6 hours based on SIEM logs.

Additional info:

- Parent Process: svchost.exe is a generic Windows host process used to run services implemented as DLLs. It commonly launches service-related components but does not typically initiate user task host processes directly.

Does this alert require escalation?

☒ Yes

☐ No

Logged-in host: win-3451

- Device: win-3451 (Windows host)

- Incident Details: At 12/27/2025 15:23:34.164, a process creation event was logged where taskhostw.exe (PID 3585) was launched with parent process svchost.exe (PID 3653). The process executed with the command line taskhostw.exe KEYROAMING from C:\Windows\system32\. The activity was flagged due to an uncommon parent-child process relationship.

- Malware Identified: None identified.

- Additional Investigation: Activity took place only once in the last 6 hours based on SIEM logs.

Additional info:

Parent Process: svchost.exe is a generic Windows host process used to run services implemented as DLLs. It commonly launches service-related components but does not typically initiate user task host processes directly.

Child Process: taskhostw.exe is responsible for running Windows tasks, particularly those related to scheduled tasks and background user components such as roaming settings (KEYROAMING).

Why This Is Uncommon: While both processes are legitimate, taskhostw.exe is more commonly triggered by the Task Scheduler or user session activity rather than directly by svchost.exe. This parent-child pairing is less frequently observed and warrants validation to ensure the activity aligns with normal system behavior.

Recommendations: Needs escalation to L2 for further investigation
