

Submitted report:

- Time of Incident: 12/27/2025 15:30:06.164

- User Involved:

Name: Michael Ascot

Email: michael.ascot@tryhatme.com

Role: CEO

- Device: win-3450 (Windows host)

- Incident Details: At 12/27/2025 15:30:06.164, a process creation event was logged where rdpclip.exe (PID 3587) was launched with parent process svchost.exe (PID 3855). The process executed with command line rdpclip from C:\Windows\system32\. The activity was flagged due to an uncommon parent-child process relationship.

- Malware Identified: None identified.

Additional Investigation: This incident only happened once in the last 48 hours upon checking on SIEM logs. This is the second alert detected in win-3450 from the last 72 hours.

- Additional info:

Parent Process: svchost.exe is a Windows service host responsible for running system services. It typically launches service-related components and background services.

Child Process: rdpclip.exe is the RDP Clipboard Monitor used to support clipboard sharing during Remote Desktop sessions. It normally starts in the context of an active RDP user session.

Why This Is Uncommon: rdpclip.exe is usually spawned by the RDP session environment when a user connects via Remote Desktop, not directly by svchost.exe. This relationship is less common and should be validated to confirm a legitimate RDP session and rule out misuse or process injection.

- Recommendations: Escalate to Level 2 (L2) for further investigation and handling.
