Case report

Please write a detailed report on the steps taken to analyse and contain this incident, including all relevant information and the rationale for its closure.

User Involved: According to Company Information > Directory

Name: Kyra Flores

Email: kyra.flores@tryhatme.com

Role: Sales

Device: win-3453 (Windows host)

Incident Details: At 12/27/2025 15:33:06.164, a process creation event was logged where rdpcclip.exe (PID 3565) was launched with parent process svchost.exe (PID 3925). The process executed with command line rdpcclip from C:\Windows\system32\.

The activity was flagged due to an uncommon parent-child process relationship.

Malware Identified: None identified.

Additional info:

Parent Process: svchost.exe is a Windows service host process used to run system services. It typically launches background service components and does not usually initiate user-session utilities directly.

Child Process: rdpcclip.exe is the Remote Desktop Clipboard Monitor, responsible for clipboard redirection during Remote Desktop (RDP) sessions.

Why This is Uncommon: rdpcclip.exe is normally started as part of an active RDP user session rather than directly by svchost.exe. This parent-child relationship is less commonly observed and should be validated to confirm a legitimate RDP connection and rule out unauthorized remote access.

Recommendations: Escalate to Level 2 (L2) for further investigation and handling.
