

Submitted report:

- Time of Incident: 12/27/2025 15:51:35.164

- User Involved: According to Company Information > Directory:

Name: Miguel O'Donnell

Email: miguel.odonnell@tryhatme.com

Role: Sales

Logged-in Host: win-3451

- Device: win-3451 (Windows host)

- Incident Details: At 12/27/2025 15:51:35.164, a process creation event was logged where taskhostw.exe (PID 3870) was launched with parent process svchost.exe (PID 3531). The process executed with command line `taskhostw.exe KEYROAMING` from `C:\Windows\system32\`. The activity was flagged due to an uncommon parent-child process relationship.

- Malware Identified: None identified.

- Additional Investigation: For reference: The incident occurred three times in the last 6 hours (Starting Dec 27th 2025 at 15:20 to 21:20) based on SIEM logs

- Additional info:

- Parent Process: `svchost.exe` is a Windows service host process that runs background system services.

- Child Process: `taskhostw.exe` executes background Windows tasks. The `KEYROAMING` parameter relates to roaming user settings and credential synchronization across devices.

- Why This Is Uncommon: Normally, `taskhostw.exe` is triggered by Task Scheduler or user session processes. Being launched directly by `svchost.exe` is less common and should be validated to ensure legitimate system activity.

- Recommendations: Escalate to Level 2 (L2) for further investigation and handling.

- This is a True Positive

- This needs escalation to L2 for further investigation
