☒ True positive

☐ False positive

Case report

Please write a detailed report on the steps taken to analyse and contain this incident, including all relevant information and the rationale for its closure.

- Time of Incident: 12/27/2025 15:53:17.164

- User Involved: According to Company Information > Directory:
Name: Michael Ascot
Email: michael.ascot@tryhatme.com
Role: CEO
Logged in Host: win-3450
- Device: win-3450 (Windows host)

- Incident Details: At 12/27/2025 15:53:17.164, a network drive (Z:) was disconnected using "net.exe" (PID 8094) launched by "powershell.exe" (PID 3728) from the user's Downloads folder. The command executed was "C:\Windows\system32\net.exe" use Z: /delete". While disconnecting a network drive is a normal action, in this context—after recent mapping and file copying—this activity may indicate attempted cleanup after data access and should be investigated.

- Malware Identified: None identified. Suspicious activity detected.

- Additional Investigation: For reference: The incident occurred only four times in the last 6 hours (Starting Dec 27th 2025 at 15:20 to 21:20) according to SIEM Logs

Does this alert require escalation?

☒ Yes

☐ No

SIEM Investigation

- For reference: The incident occurred only four times in the last 6 hours (Starting Dec 27th 2025 at 15:20 to 21:20)

Submitted report:

- Time of Incident: 12/27/2025 15:53:17.164

-User Involved: According to Company Information > Directory:

Name: Michael Ascot

Email: michael.ascot@tryhatme.com

Role: CEO

Logged-in Host: win-3450

- Device: win-3450 (Windows host)

- Incident Details: At 12/27/2025 15:53:17.164, a network drive (Z:) was disconnected using `net.exe` (PID 8004) launched by `powershell.exe` (PID 3728) from the user's Downloads folder. The command executed was `"C:\Windows\system32\net.exe" use Z: /delete`. While disconnecting a network drive is a normal action, in this context—after recent mapping and file copying—this activity may indicate attempted cleanup after data access and should be investigated.

- Malware Identified: None identified. Suspicious activity detected.

- Additional Investigation: For reference: The incident occurred only four times in the last 6 hours (Starting Dec 27th 2025 at 15:20 to 21:20) according to SIEM Logs

- Additional info:

Parent Process: `powershell.exe` was used to execute the disconnection command.

Child Process: `net.exe` is the Windows utility for managing network connections.

Why This Is Uncommon: Mapping, copying data, and immediately disconnecting a network drive from a script in the Downloads folder is unusual for normal user behavior. This sequence is often associated with data staging or exfiltration and warrants validation.

- Recommendations: Escalate to Level 2 (L2) for further investigation and handling.

- This is a True Positive

- This needs escalation to L2 for further investigation
