☒ True positive

☐ False positive

Case report

Please write a detailed report on the steps taken to analyse and contain this incident, including all relevant information and the rationale for its closure.

-Time of incident: 12/27/2025 15:54:04.164

-User Involved: According to Company Information > Directory:
Name: Michael Ascot
Email: michael.ascot@tryhatme.com
Role: CEO
Logged-in Host: win-3450-Device: win-3450 (Windows host)

-Incident Details: At 12/27/2025 15:54:04.164, nslookup.exe (PID 3800) was executed by powershell.exe (PID 3728) from "C:\Users\michael.ascot\downloads\exfiltration\". The command issued a DNS query to the external domain "nL8inMDy7NtU0sq5SryCmu4OVyprsk.haz4rdw4re.io". This activity continues a sequence of automated DNS requests with encoded-looking subdomains following file access and network drive operations, consistent with ongoing DNS-based data exfiltration attempts.

-Malware Identified: None explicitly identified. Activity strongly suggests DNS-based exfiltration behavior.

Additional Investigation:

-Additional info:

Does this alert require escalation?

☒ Yes

☐ No

SIEM Investigation

- For reference: The incident occurred ten times in the last 6 hours (Starting Dec 27th 2025 at 15:20 to 21:20)

Submitted report:

-Time of Incident: 12/27/2025 15:54:04.164

-User Involved: According to Company Information > Directory:

Name: Michael Ascot

Email: michael.ascot@tryhatme.com

Role: CEO

Logged-in Host: win-3450-Device: win-3450 (Windows host)

-Incident Details: At 12/27/2025 15:54:04.164, nslookup.exe (PID 3800) was executed by powershell.exe (PID 3728) from `C:\Users\michael.ascot\downloads\exfiltration\`. The command issued a DNS query to the external domain `nLz8nMDy7NzU0sqTSryCmu4OVyprsk.haz4rdw4re.io`. This activity continues a sequence of automated DNS requests with encoded-looking subdomains following file access and network drive operations, consistent with ongoing DNS-based data exfiltration attempts.

-Malware Identified: None explicitly identified. Activity strongly suggests DNS-based exfiltration behavior.

Additional Investigation: The incident occurred ten times in the last 6 hours (Starting Dec 27th 2025 at 15:20 to 21:20) according to SIEM Logs

-Additional info:

Parent Process: powershell.exe was used to automate repeated DNS queries, indicating scripted execution rather than normal user-driven activity.

Child Process: nslookup.exe is a built-in Windows DNS utility that can be abused to transmit data covertly via DNS queries.

Why This Is Uncommon: Multiple high-entropy DNS queries executed in rapid succession from a directory named "exfiltration" are not normal system or user behavior and are characteristic of data exfiltration techniques.

-Recommendations: Escalate to Level 2 (L2) for further investigation and handling.

-This is a True Positive

-This needs escalation to L2 for further investigation
